### Insect Repellents and You

All the EPA-registered active ingredients have some repellent activity, but most authorities recommend those containing DEET as the most reliable and long-lasting. DEET repels mosquitoes, ticks, and other arthropods when applied to the skin or clothing. In general, the more DEET a repellent contains, the longer time it can protect against mosquito bites (see table). However, there appears to be no added benefit of concentrations greater than 50 percent. Length of protection also varies with ambient temperature, amount of perspiration, any water exposure, abrasive removal, and other factors.

DEET Concentration	Hours of Protection
23.8%	5
20%	4
6.65%	2

1

Picnics and fireworks are great fun. Play it safe and be sure to use repellent.

Independence Day

Did you know that male mosquitoes don't bite? They only feed on plant nectar.
